Dear BRH Medical,

Thank you for allowing us to perform treatments using the Activessel machine. We have treated patients that have noticed significant benefit from the Activessel treatment.

One of our patients, *Diane R.*, has been suffering from chronic lower back pain and has had several lower back surgeries. She constantly wears a custom back brace anytime she is in the upright position due to the severity of her pain. After 6 Activessel treatments, *Diane R.* reported being able to get up in the middle of the night to use the bathroom without feeling the need to don her back brace. She also noted her back muscles feeling much more supple and relaxed as a result of the Activessel treatments.

Another one of our patients, *Quentin E.* had suffered a fall onto a stone floor at home just 2 days prior to his marathon race he was hoping to use as his qualifying event for the Boston Marathon. After a single Activessel treatment, he noticed a significant reduction in the pain in his (L)hip and following a second Activessel treatment, the large bruise that had spread from his (L)lateral hip to his (L)lateral knee had vanished. *Quentin E.* qualified for the Boston Marathon and will run it for 9 successive years in a row.

The Activessel is a remarkable unit that has helped a number of our patients. More clinics and patients need to experience the incredible results.

Sincerely,

Brian W. Wong, PT
